

# Who Are the Top500 List Countries?

Gary M. Johnson, Computational Science Solutions

Since June of 1993, the [Top500 List](#) [1] has been presenting information on the world's 500 most powerful computer systems. The statistics about these systems have proven to be of substantial interest to computer manufacturers, users and funding authorities. While interest in the list is focused on the computers, less attention is paid to the countries hosting them. Let's take a look at the Top500 List countries. Who are they? How might one characterize them?

So far, there have been 42 editions of the Top500 List. Over those editions, a total of 58 countries have appeared on the list:

Australia, Austria, Belarus, Belgium, Brazil, Bulgaria, Canada, China, Colombia, Cyprus, Czech Republic, Denmark, Egypt, Finland, France, Germany, Greece, Hong Kong, Hungary, India, Indonesia, Ireland, Israel, Italy, Japan, South Korea, Liechtenstein, Luxembourg, Malaysia, Mexico, Netherlands, New Zealand, Nigeria, Norway, Oman, Peru, Philippines, Poland, Portugal, Puerto Rico, Qatar, Russia, Saudi Arabia, Singapore, Slovak Republic, Slovenia, South Africa, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, United Arab Emirates, United Kingdom, United States, Venezuela, Vietnam

Depending on how one counts, there are somewhere between 191 and 260 "countries" in the world. So, the list of those that at one time or another chose to join the list is in the range of 22% to 30% of total countries.

Before we take a closer look at the current situation, let's review some of the historical data. Between June 1993 and November 2013, the number of countries on the Top500 List has varied from a low of 21 in November 1998 and June 1999 to a high of 39 in November 2003. The average number is 28, which also happens to

## Who Are the Top500 List Countries?

Published on Scientific Computing (<http://www.scientificcomputing.com>)

---

be the current number.

Nine of the 58 Top500 List countries have only appeared in one edition:

Colombia (June 2004), Cyprus (June 2008), Hungary (November 2000), Nigeria (June 2002), Peru (June 2000), Philippines (June 2007), Puerto Rico (November 2001), Qatar (June 2004), Vietnam (June 2007)

We note that summer is the season of choice for the one-timers.

Ten countries have appeared in every edition, so let's call them the Top500 Stalwarts:

Australia (AU), Canada (CA), France (FR), Germany (DE), Italy (IT), Japan (JP), Sweden (SE), Switzerland (CH), United Kingdom (GB), United States (US)

Of the remaining 39 countries, 20 have appeared more than half the time. Of those 19 with good but not perfect attendance, 11 countries have appeared more than about 75% of the time. We'll call them the Top500 Enthusiasts:

Belgium (BE), Brazil (BR), China (CN), Denmark (DK), Finland (FI), South Korea (KR), Netherlands (NL), Norway (NO), Saudi Arabia (SA), Spain (ES), Taiwan (TW)

Note that China, currently occupying the top spot on the list, and Saudi Arabia would just miss the Enthusiast category by each coming in at 74% attendance - but we've included them anyway. This makes the point that these divisions are a bit arbitrary.

While citing caveats, we should also mention that, since the Top500 List is a collection of volunteered information, it neither is nor pretends to be comprehensive. For various reasons, sites may choose not to participate. So, the kind of analysis we're doing here has its limitations.

For future reference, we'll call the combined grouping of Stalwarts and Enthusiasts the Top500 Players.

Now let's take a closer look at these groupings. Who are the countries in them? What are some of the group attributes?

Below are a couple of tables, showing how the Stalwarts and the Enthusiasts rank on several indexes: [GDP](#) [2], [GDP per capita](#) [3], [Global Competitiveness](#) [4], [Global Innovation](#) [5], [Knowledge Economy](#) [6], and [Prosperity](#) [7]. Ranking high on these indexes is something to which most countries aspire. Also, we like to think of supercomputing as a tool for improving economies, adding to knowledge and increasing prosperity.

Index/Rank	Top500 Stalwarts	AVG

## Who Are the Top500 List Countries?

Published on Scientific Computing (<http://www.scientificcomputing.com>)

	AU	CA	FR	DE	IT	JP	SE	CH	GB	US	
GDP	17	13	9	5	11	4	33	37	8	1	14
GDP per capita	20	24	37	26	45	36	22	14	33	12	27
Global Competitiveness	21	14	23	4	49	9	6	1	10	5	14
Global Innovation	19	11	20	15	29	22	2	1	3	5	13
Knowledge Economy	9	7	24	8	30	22	1	10	14	12	14
Prosperity	7	3	20	14	32	21	4	2	16	11	13
Average over Index Averages											16

Index/Rank	Top500 Enthusiasts											AVG
	BE	BR	CN	DK	FI	KR	NL	NO	SA	ES	TW	
GDP	32	7	2	53	56	12	23	46	18	14	20	26
GDP per capita	29	103	120	30	34	40	21	9	54	44	27	47
Global Competitiveness	17	56	29	15	3	25	8	11	20	35	12	21
Global Innovation	21	64	35	9	6	18	4	16	42	26	N/A	24
Knowledge Economy	15	60	84	3	2	29	4	5	50	21	13	26
Prosperity	17	46	51	6	8	26	9	1	50	23	22	24
Average over Index Averages											28	

On average, the countries in both groups rank highly against world norms. However, by these measures, the Stalwarts do almost twice as well as the Enthusiasts.

## Who Are the Top500 List Countries?

Published on Scientific Computing (<http://www.scientificcomputing.com>)

---

Seven of the [Group of Eight \(G8\)](#) [8] leading industrialized countries – all except Russia – are among the Stalwarts. Half of the Stalwarts and 5 of the 11 Enthusiasts are [European Union](#) [9] member countries. Six of the Stalwarts and six of the Enthusiasts are members of the [Partnership for Advanced Computing in Europe \(PRACE\)](#) [10]. So, 10 of the 28 EU member countries and 12 of 25 PRACE members are among the Top500 Players.

If we use the number of [Science Nobel Laureates](#) [11] claimed by the countries in each of the groups as a measure, then as of 2010 the Stalwarts had accumulated 627 versus the Enthusiasts who had only 50. Together, the vast majority of Nobel Laureates in science are claimed by the Top500 Players.

Since we often compare supercomputing to Formula 1 racing, let's take a look at the number of [Formula 1 wins](#) [12] racked up by each of the groups during the period from 1950 through 2013. The Stalwarts have 39 and the Enthusiasts only 14. But, together as the Players, they account for 83% of all wins.

If we switch from automobile racing back to computer racing and take a look at some data from the [November 2013 Top500 List](#) [13], here's how things stand:

Country	Top500 Stalwarts					
	Number of Systems	Sum of Rmax (TF)	Sum of Rmax (% of List Total)	Average System Size (TF)	GF/(GDP Billion)	MF per capita
Australia (AU)	5	2,180	0.87%	436	2,184	97
Canada (CA)	10	2,078	0.83%	208	1,369	60
France (FR)	22	9,490	3.79%	431	4,175	143
Germany (DE)	20	13,697	5.48%	685	4,244	169
Italy (IT)	5	2,666	1.07%	533	1,477	43
Japan (JP)	28	22,472	8.99%	803	4,752	177
Sweden (SE)	5	1,068	0.43%	214	2,711	110
Switzerland (CH)	5	7,765	3.11%	1,553	20,971	963
United Kingdom (GB)	23	9,058	3.62%	394	3,809	142
United States (US)	264	118,262	47.29%	448	7,073	371
Averages	39	18,874	7.55%	570	5,277	227

## Who Are the Top500 List Countries?

Published on Scientific Computing (<http://www.scientificcomputing.com>)

---

Country	Top500 Enthusiasts					
	Number of Systems	Sum of Rmax (TF)	Sum of Rmax (% of List Total)	Average System Size (TF)	GF/(GDP Billion)	MF per capita
Belgium (BE)	1	152	0.06%	152	361	15
Brazil (BR)	3	626	0.25%	209	258	3
China (CN)	63	48,549	19.41%	771	3,631	36
Denmark (DK)	1	162	0.06%	162	767	29
Finland (FI)	2	378	0.15%	189	1,934	72
Korea, South (KR)	5	1,258	0.50%	252	755	26
Netherlands (NL)	3	511	0.20%	170	734	30
Norway (NO)	3	735	0.29%	245	2,606	143
Saudi Arabia (SA)	3	1,165	0.47%	388	1,256	43
Spain (ES)	2	1,199	0.48%	600	863	25
Taiwan (TW)	1	177	0.07%	177	191	8
Averages	8	4,992	2.00%	301	1,214	39

Here again we notice that, as groupings, the Stalwarts outdo the Enthusiasts - but by a considerably wider margin than they did on the previously cited economic measures.

The sum of the Rmax values for all 500 entries in the November 2013 list yields just over 250 Petaflops. Of that total, the Top500 Stalwarts have 75% and the Enthusiasts have 22%. Within the Stalwarts, the US alone has 47% of the list total and within the Enthusiasts China dominates at 19%.

It is also interesting to note that, on a Megaflops per capita basis, the best country in the world - by far - is Switzerland. Switzerland is also ranked first in the world by the Global Competitiveness and Global Innovation indexes.

## Who Are the Top500 List Countries?

Published on Scientific Computing (<http://www.scientificcomputing.com>)

---

Having noted the dominance of the US and China, let's see how the European Union countries on the Top500 List would look, taken as an entity. If we look at the averages over those countries, not surprisingly, they look about the same as or somewhat better than the Top500 Enthusiasts group. But they are pretty distant from the Stalwarts.

Country	Top500 European Union					
	Number of Systems	Sum of Rmax (TF)	Sum of Rmax (% of List Total)	Average System Size (TF)	GF/(GDP Billion)	MF per capita
Austria (AT)	1	153	0.06%	153	424	19
Belgium (BE)	1	152	0.06%	152	361	15
Denmark (DK)	1	162	0.06%	162	767	29
Finland (FI)	2	378	0.15%	189	1,934	72
France (FR)	22	9,490	3.79%	431	4,175	143
Germany (DE)	20	13,697	5.48%	685	4,244	169
Ireland (IE)	2	269	0.11%	134	1,411	56
Italy (IT)	5	2,666	1.07%	533	1,477	43
Netherlands (NL)	3	511	0.20%	170	734	30
Poland (PL)	2	456	0.18%	228	560	12
Spain (ES)	2	1,199	0.48%	600	863	25
Sweden (SE)	5	1,068	0.43%	214	2,711	110
United Kingdom (GB)	23	9,058	3.62%	394	3,809	142
Averages	7	3,020	1.21%	311	1,805	66
European Union (EU)	89	39,258	15.70%	311	2,735	94

On the other hand, the numbers for an EU entity are quite impressive, sweeping up

---

## Who Are the Top500 List Countries?

Published on Scientific Computing (<http://www.scientificcomputing.com>)

---

almost 16% of the list total for Rmax. Viewed from this perspective and as summarized in the table below, three entities dominate world supercomputing: China, the European Union and the United States.

Entity	Top500 World					
	Number of Systems	Sum of Rmax (TF)	Sum of Rmax (% of List Total)	Average System Size (TF)	GF/(GDP Billion)	MF per capita
China (CN)	63	48,549	19.41%	771	3,631	36
European Union (EU)	89	39,258	15.70%	311	2,735	94
United States (US)	264	118,262	47.29%	448	7,073	371
Averages	139	68,690	27.47%	510	4,480	167
CN+EU+US	416	206,069	82.40%	510	13,439	501
World	500	250,080	100.00%	500	3,763	63

# Who Are the Top500 List Countries?

Figure 4: GII scores and GDP per capita in PPP\$ (bubbles sized by population)

Note: 'Efficient innovators' are countries/economies with Innovation Efficiency ratios  $\geq 0.78$ ; 'Inefficient innovators' have ratios  $< 0.78$ ; the trend line is a polynomial of degree three with intercept ( $R^2 = 0.7178$ ).

We'll round out our collection of supercomputing factoids by taking a look at a plot

## Who Are the Top500 List Countries?

Published on Scientific Computing (<http://www.scientificcomputing.com>)

---

of the Global Innovation Index (GII) country ratings versus their per capita GDPs. This is shown in the following figure, taken from the 2013 edition of the [Global Innovation Index Report](#) [5]. Note that country data points are sized by population and that those colored white indicate “efficient innovators” (i.e. those scoring 0.78 or better on the Innovation Efficiency Ratio – see the report of details).

Overlaid on the figure are red and green ellipses, showing the locations of the Top500 Stalwarts and Players, respectively. We see that almost all Stalwarts are innovation leaders and quite a few are also efficient ones. When we expand to the Players, we capture a number of innovation learners and some countries lying under the trend line – but still a pretty good showing.

Overall, our Top500 List countries are quite an impressive bunch.

I wonder what changes the June 2014 list will bring.
